REMOTE OPERATION

The 410 robot's power control module (PCM) can be disconnected from the tracked crawler. This allows you to drive the crawler into tight and inhospitable environments, such as small tunnels and flooded sewer pipes. Useful and clever!

You can operate the crawler from a safe distance with a radio remote control. In such situations the PCM is connected to the crawler by a cord, ensuring complete control of the robot in horizontal, vertical and overhead operations. In other words, the trolley makes your day at the working site easy, safe and comfortable.

FEATURES & BENEFITS

// CONTROL FROM A DISTANCE

The 410 robot's power control module (PCM) can control any of our hydrodemolition tools from a distance. It could be the tracked crawler, an AQUA SPINE or AQUA FRAME.

// TUNNELS

The tracked crawler can go into tight and inhospitable environments, such as small tunnels and flooded sewer pipes.

// SCAFFOLDINGS

When the PCM is disconnected, the tracked crawler is significantly lighter and suitable when weight is an issue, such as scaffoldings and platforms.

// AQUA SPINE OR AQUA FRAME

With the PCM carrier, the 410 PCM can also be used as a Power Control Unit to control the AQUA SPINE or the AQUA SPINE.

// TECHNICAL DATA

PCM position	_____	Backward/Forward
Brakes	_____	Front wheels
Steering	_____	Front wheels
Weight	_____	70kg (154 lb)

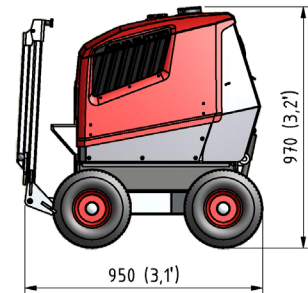

// COMPATIBLE PRODUCTS

AQUA CUTTER 410A
AQUA CUTTER 410V Tunnel kit
AQUA SPINE
AQUA FRAME

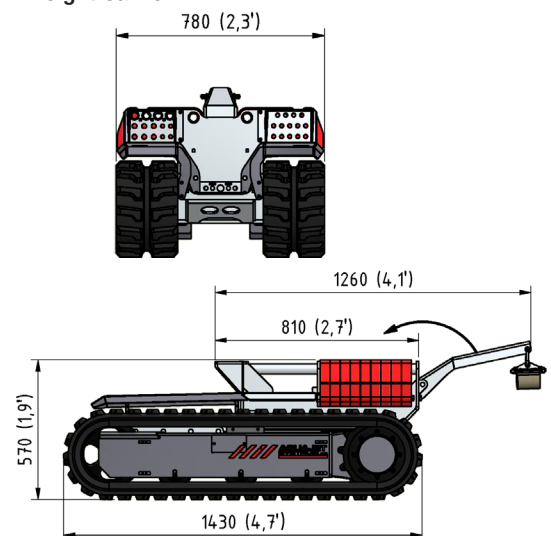

// EXAMPLES OF APPLICATIONS

Tunnels
Hydropower plants
Nuclear plants
Petrochemical plants
